

SUSTAINABLE SOLUTIONS CONFERENCE

Engineering High Performance Buildings

June 8-9, 2010
Chicago, IL

Produced By:

BUILDING INTELLIGENCE
GROUP
LLC

- ▶ Are you aware of the new codes, standards, mandates, and requirements for energy efficiency and sustainability?
- ▶ Could you benefit from learning about the latest technology and designs for high performance buildings?
- ▶ Would you like to connect with building designers, owners, operators, and contractors?

Attend the Sustainable Solutions Conference and Get REAL ANSWERS to Your Questions

The building systems industry is in the early stages of a dramatic shift. New codes, standards, mandates, and requirements for energy efficiency and sustainability are pushing the limits of system designers, owners and operators. As changes in the industry accelerate towards a "zero net energy" performance level, industry leaders in systems, solutions, design and operations gain opportunity.

The Sustainable Solutions Conference on Engineering High Performance Buildings is a two day program featuring three tracks with presentations focused on the technology and innovation, design and delivery and operations. With the central theme, *Optimization of Building Systems and Facility Operations*, you can't afford to miss this event!

Topics Include:

- Leading Edge Innovation
- Controls
- Heating & Cooling
- Air Distribution & Ventilation
- Lighting
- Fundamentals & Issues
- Chiller Plants
- High Performance Operations
- Metering & Energy Information Systems
- Continuous Commissioning
- Smart Grid and Demand Response
- Resources
- Tools
- Applications/Case Studies

Get Ready For Changes In The Building Systems Industry.
Make A Smart Investment Of Your Time And Money.
